SUMMARY

B.Sc. Statistics (Honours) graduate with hands-on experience turning large datasets into actionable business insight using SQL, Excel, and Power BI — including revenue trends, customer behavior patterns, and performance dashboards. Interested in applying analytical rigor to growth and marketing problems: understanding user behavior, campaign performance, and what drives retention and monetization.

TECHNICAL SKILLS

- Query & Data Handling: SQL (Joins, Aggregations, Filtering, Grouping)
- Spreadsheet Analysis: Microsoft Excel (Pivot Tables, VLOOKUP, Charts, Data Cleaning)
- Business Intelligence: Power BI (Interactive Dashboards, Data Modeling, DAX Basics)
- Programming: Python (working knowledge — scripting, data cleaning, basic analysis)
- Statistical Concepts: Hypothesis Testing, Probability, Regression, Exploratory Data Analysis
- Core Strengths: Analytical Thinking, Attention to Detail, Communication

PROJECTS

Revenue & Product Performance Analysis — SQL, Power BI

- Queried and joined 2,000+ multi-region sales records using SQL (joins, aggregations, grouping) to surface revenue and product performance trends
- Identified consistently top-performing product categories and regional revenue gaps, informing prioritization discussions
- Built an interactive Power BI dashboard translating findings into stakeholder-ready KPIs; findings directly informed which product categories and regions merited increased marketing investment

Interactive Sales Performance Dashboard — Power BI

- Designed a multi-view Power BI dashboard with drill-through pages to monitor revenue and product performance in real time
- Applied data modeling and DAX measures to compare performance across regions and time periods — similar to tracking acquisition and retention metrics over time
- Structured views for quick review, reducing time spent compiling manual reports

Retail Transaction & Seasonal Trend Analysis — Microsoft Excel

- Cleaned and analyzed 500,000+ retail transaction records using pivot tables and charts to identify key revenue contributors
- Uncovered seasonal sales spikes and recurring customer purchasing patterns through exploratory data analysis
- Identified peak-demand windows that could inform the timing of promotional and acquisition campaigns

Airline Delay Pattern Analysis — SQL, Excel, Power BI

- Queried flight delay data across routes, airports, and time periods in SQL to detect recurring operational bottlenecks
- Combined SQL and Excel analysis to isolate the routes and time windows with the highest delay concentration
- Built a Power BI dashboard visualizing delay trends, supporting data-driven decision-making

EDUCATION

B.Sc. Statistics (Honours)

University of North Bengal | CGPA: 7.70 / 10

Coursework: Probability, Regression, Hypothesis Testing, Multivariate Analysis, Time Series, Design of Experiments, Statistical Quality Control, Exploratory Data Analysis

St. Joseph's High School — ISC Class XII (2021)

English, Mathematics, Physics, Chemistry | Percentage: 74%

CERTIFICATIONS & LEARNING

- IBM — Introduction to Data Analytics
- Google — Fundamentals of Digital Marketing
